BIOL110 section W12L is a special research-based section of general biology lab called SEA-PHAGES. In this course students will participate in a biological investigation through a research project in bacteriophage isolation and identification. Bacteriophages are viruses that infect bacteria. They are considered the most abundant entities on earth. Their enormous diversity and number make them important models for the study of gene structure, function and regulation, population genetics, and evolution. In addition, they are emerging as important tools in biotechnology and as therapeutics for bacterial infections. Students will isolate their own novel bacteriophage and characterize its biological properties, and in so doing, gain valuable laboratory skills and research experience. The genomes of the bacteriophages isolated by students will be the subject of investigation in a companion section of the SEA-PHAGE course that runs as a special section of general biology II lab (BIOL150-W11L) in the Spring semester.
