Dilemma #1

The Case of the Mangled Miracle Drug

From: Christopher

To: Miujiza's Minister of Health

After a long and difficult discussion and contemplation, we are pleased to inform you that we will be selling the IDB drug.

The reason that it took us so long to come to a decision, because of undesirable circumstances. We have experienced a setback pertaining to the IDB drug batch; there were problems in the development of the drug, and there has been contamination in the batch. However, we have calculated that only a small percentage of the drug has been contaminated, approximately 10% of the batch is contaminated.

We have decided to sell you the drug because we believe that it is in best interest of the people of Miujiza who are stricken with their conditions to receive this drug. However, there is a condition because there is chance of unwanted side effects, we want the Ministry of Health ensure full disclosure of the risks of using the drug before dispensing the IDB to any person. And to make sure there is less injury, we will be depositing to an independently managed fund to provide needed medical services for any illnesses directly caused by the drug.

The reason we have decided to sell you the drug because we believe that it is in best interest of the people of Miujiza who are stricken with their conditions to receive this drug. We want give the people a better chance to cure their illness, even if there is a slim chance that they will experience unwanted side effects. We will be taking precautions to make sure the citizens of Miujiza will have information and medical support on this drug. The Ministry of Health will fully disclosure all the risks of using the drug before dispensing the IDB to any person, and we will be depositing to an independently managed fund to provide needed medical services for any illnesses directly caused by the drug.

This decision was hard for us as human beings to choose, we wanted to present a drug that will give a 100% rate of success to cure them of their AIDS with no side effects what's so ever. However, because extenuating circumstances, we couldn't do that, and we can't produce another batch at the moment. However, once productions of the second batch, we hope that you'll do business with us again.
